

LUMINA 200^{D/S}

Lumina 200 BACKLIT is a BACKLIT, double sided lightbox that can freestand on feet, be suspended with cables or actually built into an existing structure. All the LEDs, drivers and all electrics are mounted to both sides of the internal backboard underneath the fabric image.

Lumina 200 accepts push fit fabrics. It can be built to almost any bespoke size and is supplied either complete or in sections for re-assembly on site.

The 200mm deep profile is supplied with an anodised aluminium finish, however, we can also powder coat to any RAL colour.

All lightboxes utilise a 24 volt LED system that is safety tested before despatch and a certificate will be supplied. They will also have a unique serial number in case of issues in the field.

The LEDs allow the use of very slim lightboxes whilst housing the drivers internally and maintaining a perfect spread of light with no shadowing.
